GoGetSSL For WHMCS
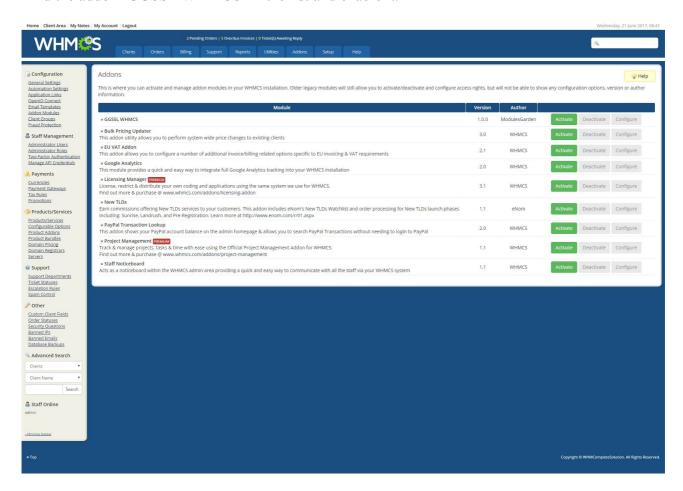

Installation and Management Guide

1. About

GoGetSSL For WHMCS is a provisioning module for WHMCS that will allow you to order certificates using the API provided by GoGetSSL.
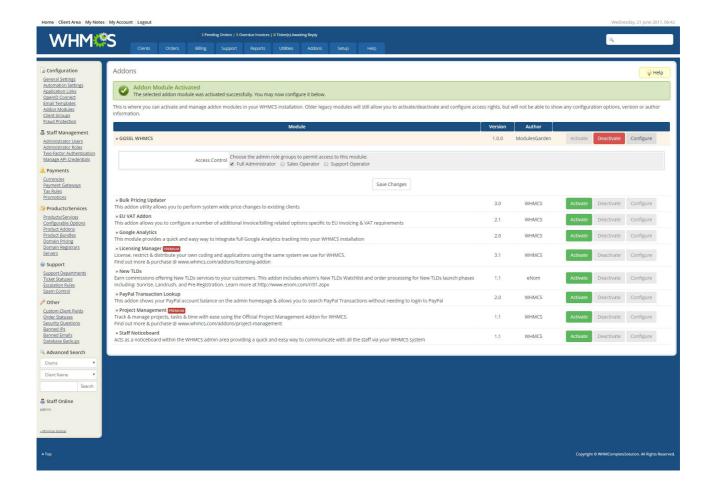

2. Installation

Extract the module files to the WHMCS root directory.

Go to 'Setup` → 'Addon Modules'.

Find the addon 'GGSSL WHMCS' in the list and enable it.

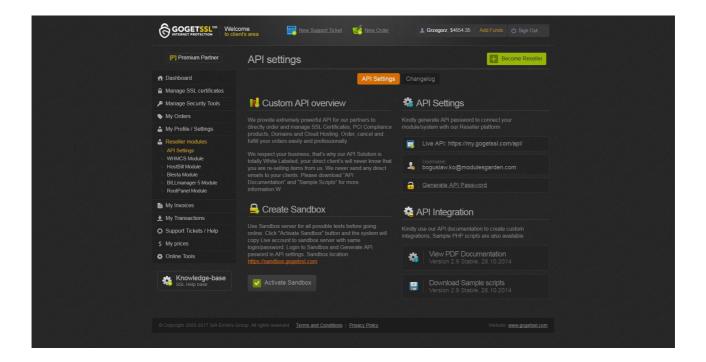

Once the activation process is completed, configure the permissions for the addon and click 'Save Changes'.

If everything went well, the addon should be available in the 'Addons' menu: 'Addons' → 'GGSSL WHMCS'.
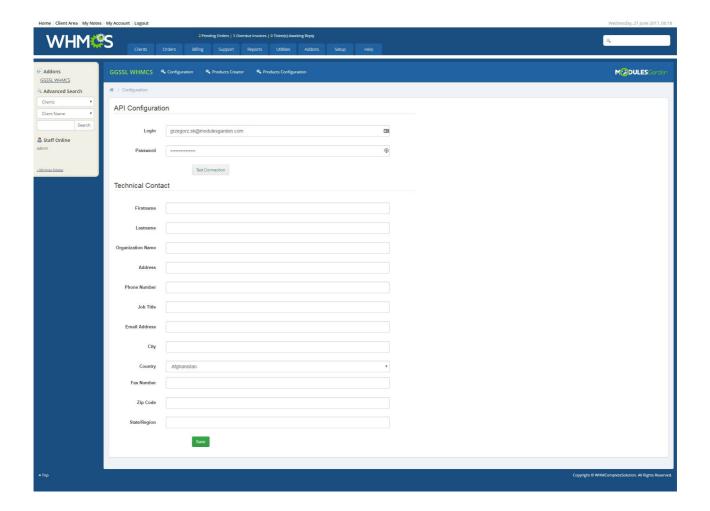

3. API Configuration

In order to download API data go to panel: https://my.gogetssl.com/en/user/api/.

Next, go to 'Addons' → 'GGSSL WHMCS'.

Open the 'Configuration' tab.
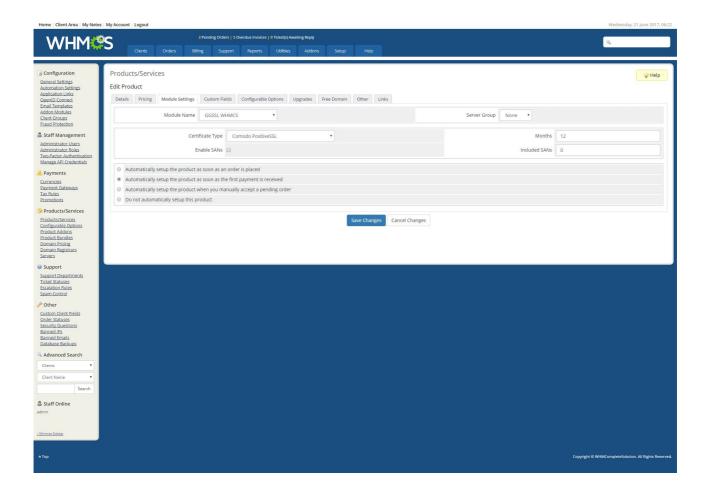

Enter your 'Login' and 'Password' (see API data at https://my.gogetssl.com/en/user/api/).

Click on 'Test Connection', if you entered correct data into the API and you face no other problems, you should see the information 'Connection established'.

Subsequently, complete the 'Technical Contact' section and click 'Save'.
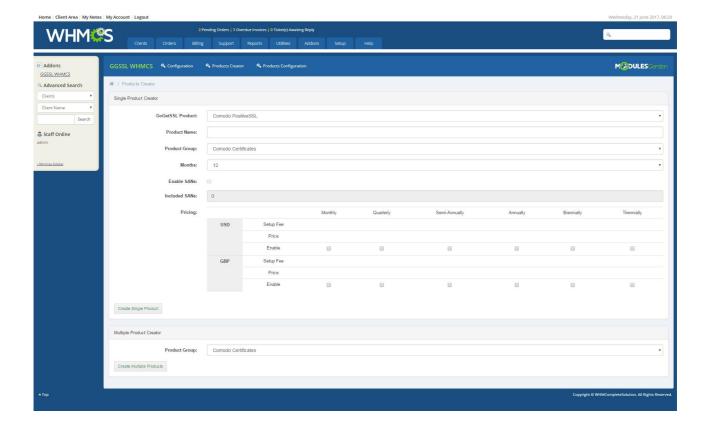

4. Products Configuration

Products ought to be added with the 'GGSSL WHMCS' addon, we do not recommend configuring products in the traditional way.

Continue with 'Addons' → 'GGSSL WHMCS'.

Proceed to 'Products Creator' tab.
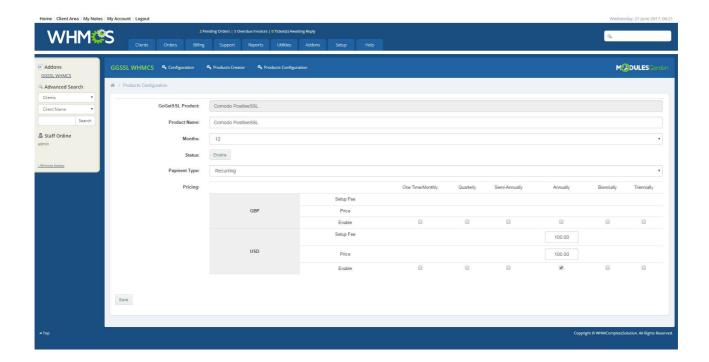

You will find there two sections: 'Single Product Creator' and 'Multiple Product Creator'.

The former assists you in adding a single product to a selected group.
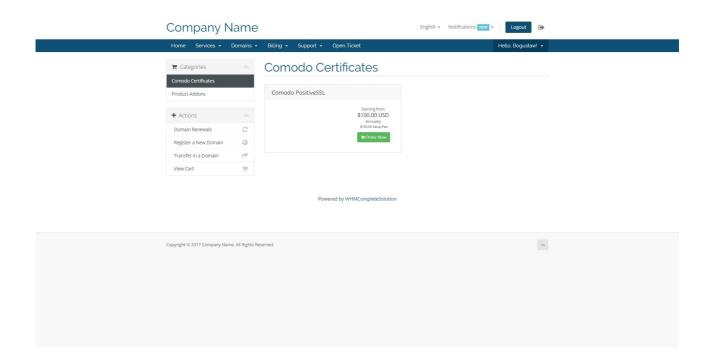

The latter will generate products for all certificates available in GoGetSSL, in a chosen group.

When you add the products, open the 'Products Configuration' tab, verify the configuration and set the status to 'Enabled', to make it visible in your store.
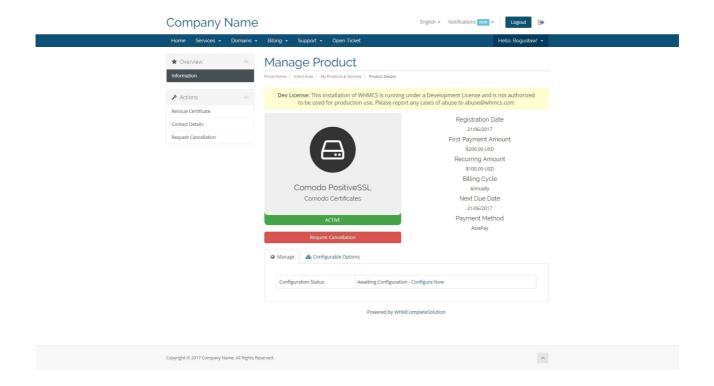

5. Order & Configuration
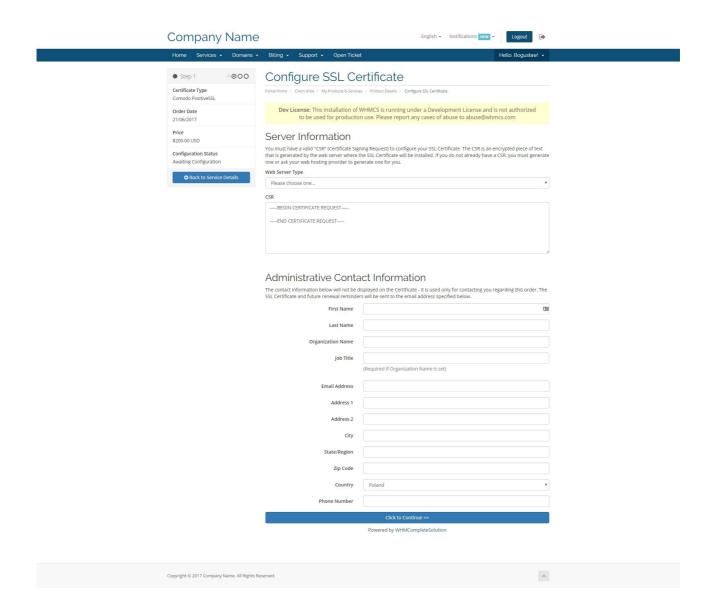

Select and purchase the service with a certificate.
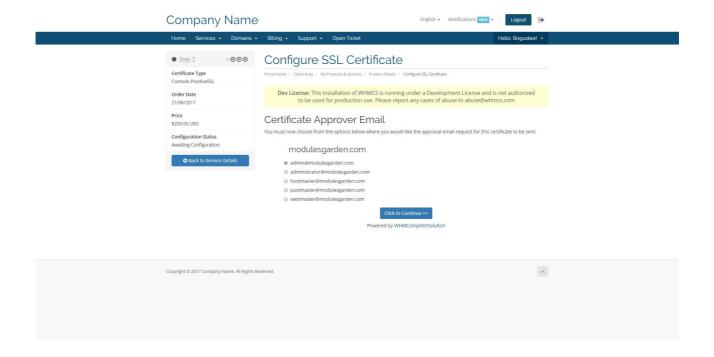

After making a payment click on the configuration link that you will receive by email, or proceed directly to the product and click on 'Configure Now'.
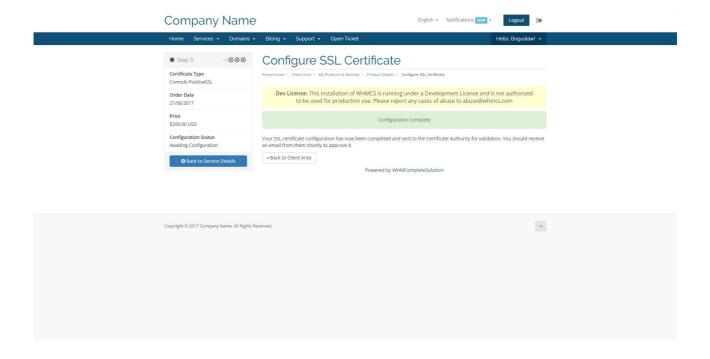

Complete data for the ordered certificate and click 'Click to Continue'.
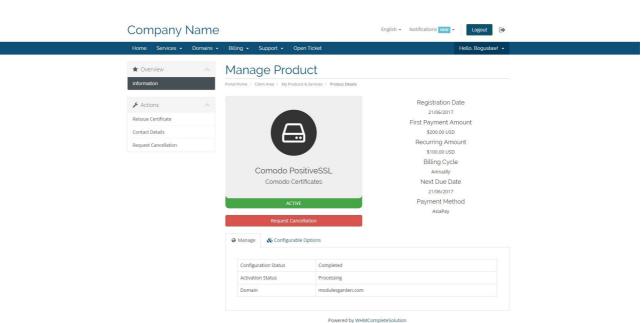

In the next step, select email to which a verification link will be sent.
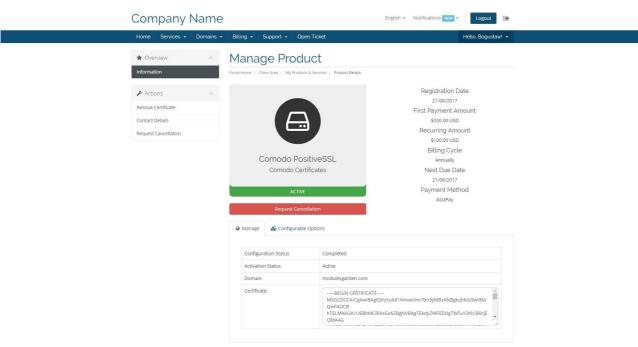

If the ordering process succeeds, you will see information 'Configuration Complete', return to the site by clicking on 'Back to Service Details'.

The website displays a preview of current status of the 'Activation Status' order, and the certificate preview in case of 'Active' status.

6. Management actions in the client area

Reissue Certificate – the reissue method with SSL certificate reissues the chosen procedure, if a client has lost the private key or wants to add more SAN names for Multi Domain or UCC orders.

View Certificate – displays certificate.

Contact Details – displays the contact data for which the certificate was ordered.

7. Management actions in the admin area

Options available in the admin area:

Create – initiates the certificate ordering process. After clicking on the product, it becomes 'Active' and client in the client area is allowed to configure the certificate,

Renew – restores certificate in GoGetSSL,

Terminate – cancels orders in GoGetSSL,

Resend Approver Emails – re-sends Approver Emails to the client on the domain/domains they configured,

Resend Certificate – if the order has 'Active' status, the certificate will be sent by e-mail to the customer,

Change Approver Email – changes the verification email assigned to the order,

View Certificate – opens the certificate window.
